Visual- and Broadband-Mediated Learning, with Special Emphasis on Music Education

Gilles Comeau et Marin Brooks

Abstract in French AND/OR in English

This session provides participants in-depth insight into next-generation distance-education and video-mediated learning. Case studies and video examples will demonstrate state-of-the-art in new pedagogy and technology, including broadband videoconference and use of video. Examples include telementoring, distance teaching to remote communities, teacher professional development and project-based learning, with a special emphasis on music education. Participants will be encouraged to brainstorm around their interests and potential applications, and strategies for implementation will be discussed. This session will be of interest to educators and staff developers, in all fields, not just music.
